

New Monitor / Service Check

1 Pick a Service Check

ping\_check

2 Pick monitor scope

region:emea

excluding

Select tags to exclude

3 Set alert conditions

Check Alert

Cluster Alert

An alert is triggered when consecutive run statuses cross your threshold.

Trigger a separate alert for each

env

reporting your check.

Trigger the alert after selected consecutive failures:

Status: Warning

1 2 3 4 5

Status: Critical

1 2 3 4 5

Do not notify for Unknown status

Resolve the alert after selected consecutive successes:

Status: OK

1 2 3 4 5

Notify

if data is missing for more than

2

minutes.

After 4 hours

automatically resolve this event from a no data state.

Before evaluating new groups, wait

60

seconds.

4 Notify your team

@henryw374@gmail.com

Notify

If this monitor is modified, notify monitor creator and alert recipients.

If this monitor stays in

Alert

No Data

renotify every

30 minutes

Stop renotifying after

0

occurrences.

5 Say what's happening
